\$20 Magnesium	\$50 Alpha Lipoic Acid
\$30 Selenium	
\$30 Vitamin B Complex	

Ozone Therapy **\$175**

Autohemotherapy involves the injection of medical grade ozone gas into the blood drawn from a patient. Once ozone is injected into drawn blood, the blood is filtered through a UV Light and infused back into the body. The treatment stimulates white blood cell formation helping the body fight illness and neutralize harmful bacteria. Increased O₂ in the body promotes cell regeneration and health.

Ozone also helps degrade petrochemicals in the body from environment or food, increasing red blood cell membrane distend ability, and helps blood flow more effectively in the body. Ozone Therapy has a cumulative effect with multiple treatments.
